Data Sync is a File Backup and Data Synchronization Software, fully automated backups and easy to use.

It is state of the art software to synchronize files and folders into multiple locations on the same computer or on Network Computers. As new file is created or updated in the specified folder or drive, it immediately makes its copies to specified destination locations. So user can restore his Files, Folder or Data from backup locations any time. It safely protects you from accidental deletes, overwrites, and virus attacks. Data Sync is a handy, small backup program that lets you easily back up your documents and folders.

In fact, you can configure it once and forget about backup hassle.

Make file Backups and synchronize it in real time

As user close the new file after saving in source Location it will automatically create it at destination Location

Compatibilities

Data Sync is compatible with most of the Microsoft platforms. Tested on Window 2000/2003/XP

Support for different types of backup storage

Data Sync is designed to work with different types of storage Media, which are as follows:

- Local Drives
- Network drives
- ZIP Files
- H.D.D.

Support for Multiple Destination Locations for Backup

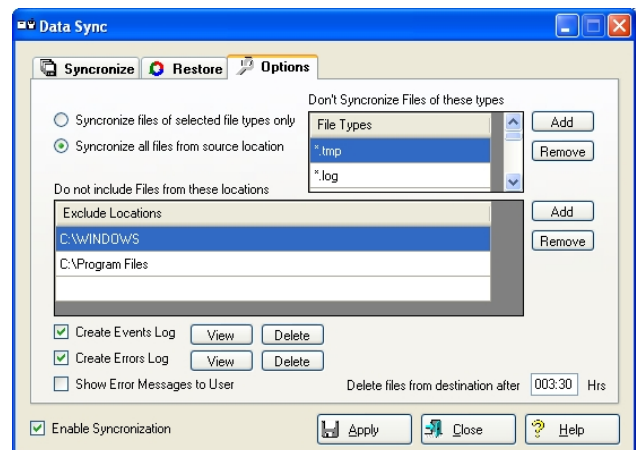

One of the strong features of Data Sync is to provide the multiple Locations option to take the backup i.e., to synchronize files and folders into multiple Destination locations on the same computer or on Network Computers.

Skip unwanted files from backup

You can skip files from backup of specific file types. by defining their extensions

Backup Tracking and Logging

Detailed errors and event's log generation.
